# ADENOMYOSIS

AFFECTS 1 IN 10 ASSIGNED FEMALE AT BIRTH

A COMMON MISCONCEPTION IS THAT ADENOMYOSIS AFFECTS THOSE IN THEIR 30S - 40S. TEENS AND YOUNG PEOPLE CAN ALSO HAVE ADENOMYOSIS

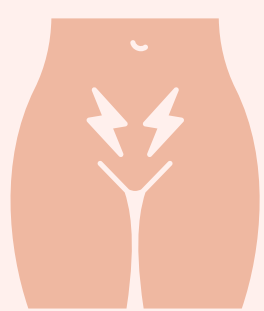

ADENOMYOSIS CAN BE MANAGED IF DIAGNOSED AT AN EARLY AGE AND WITH THE RIGHT HEALTHCARE TEAM

The PAIN can be at least as bad as endometriosis, sometimes worse, because the person doesn't yet have a diagnosis.

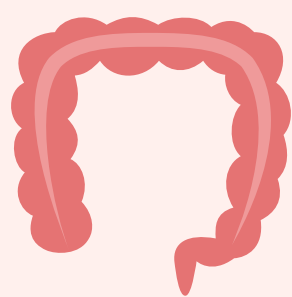

## Symptoms of Adenomyosis

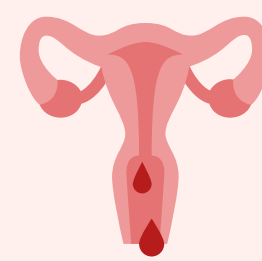

If you or someone you know experiences any of the following symptoms, talk with your doctor about adenomyosis. Adenomyosis may be responsible for ongoing pain after excision surgery for endometriosis.

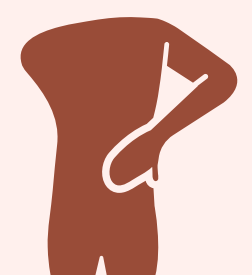

Pelvic pain + cramping

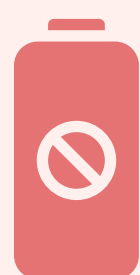

Pain during or after bowel motions

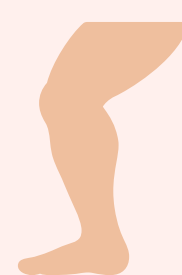

Heavy bleeding

Lower back pain

Fatigue

Referred Leg Pain

Painful intercourse
